

PAYING WITH CRYPTO.

Two guided routes for turning AUD into a confirmed Aussie Peptides order – whichever suits how comfortable you are with crypto.

ROUTES: MERCURYO · COINSPOT + EXODUS

CHOOSE YOUR ROUTE.

Both routes end with Bitcoin arriving in our order wallet. Pick based on speed vs. how much control you want over your own crypto along the way.

Route A

MERCURYO — INSTANT CHECKOUT

Pay with your card. Mercuryo converts your AUD and sends BTC straight to our order wallet — no exchange account or wallet app needed.

TIME	BEST FOR	YOU NEED
~5 MIN	FIRST-TIME BUYERS	CARD + EMAIL

Route B

COINSPOT + EXODUS — SELF-CUSTODY

Buy BTC on an Australian exchange, move it into your own wallet, then send the payment yourself. More steps, but you hold your own keys throughout.

TIME	BEST FOR	YOU NEED
15–30 MIN	EXISTING CRYPTO USERS	ID + PAYID BANKING

BOTH ROUTES ARE COVERED ON THE FOLLOWING PAGES

PAY WITH CARD.

● SERVER: AUSSIEPEPTIDES.ORG

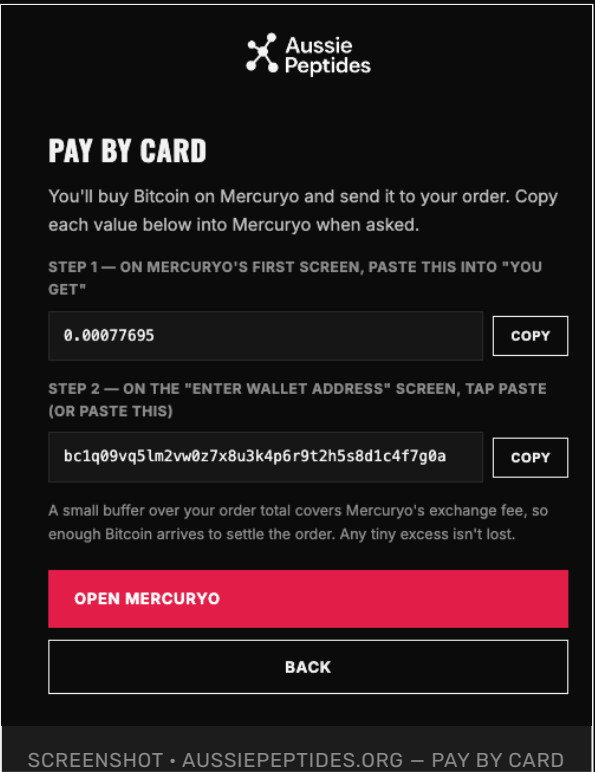

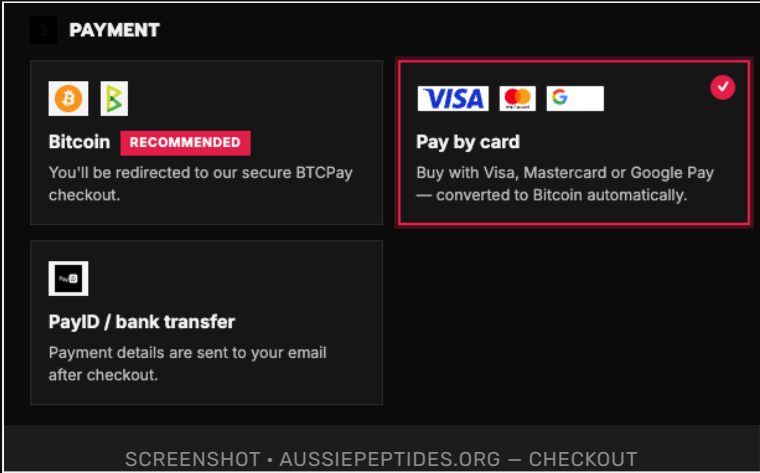

● **SELECT PAY BY CARD**

At checkout, choose the **“Pay by card”** tile – Visa, Mastercard and Google Pay accepted. This routes your card payment through Mercuryo, a licensed exchange partner, which converts it to Bitcoin automatically.

● **COPY YOUR TWO VALUES**

Our next page shows a **BTC amount** and our **receiving address**, each with its own Copy button. The amount already includes a small buffer to cover Mercuryo's fee – paste it exactly, don't reduce it. Tap **Open Mercuryo** once both are copied.

Why copy-paste? Mercuryo's public checkout doesn't accept pre-filled amounts or addresses from other sites – pasting them yourself is the reliable way to get both fields exactly right.

COMPLETE ON MERCURYO.

● SERVER: EXCHANGE.MERCURYO.IO

● PASTE THE AMOUNT

On Mercuryo's first screen, paste the BTC figure you copied into the **"You get"** field. Leave it exactly as pasted – it already covers Mercuryo's fee.

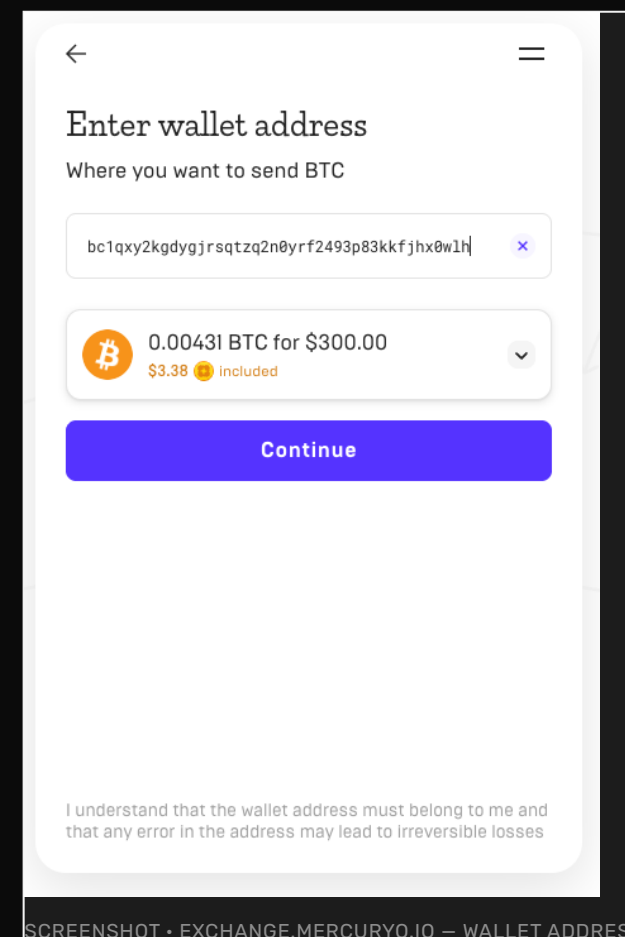

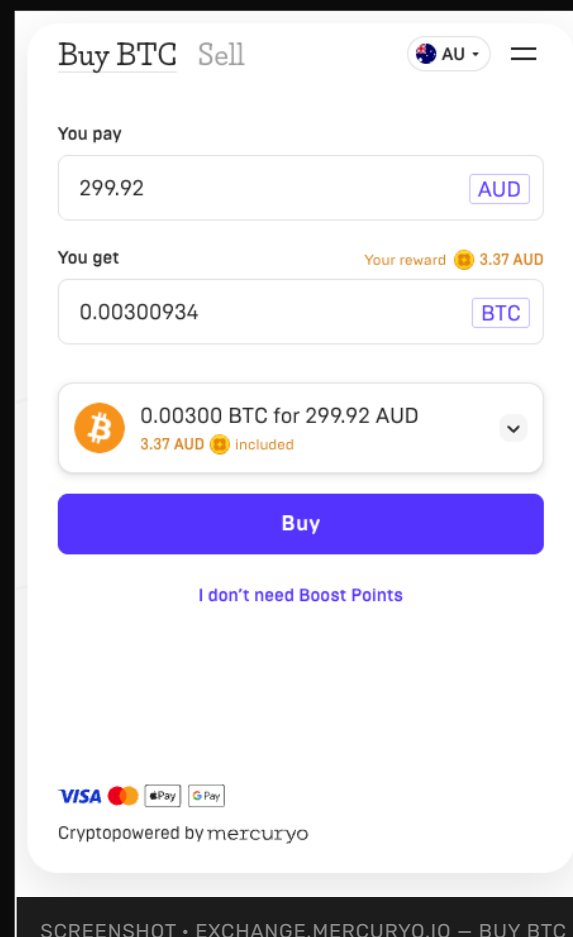

● PAY & VERIFY

Enter your card details (Apple/Google Pay on mobile), verify your email via the one-time code, then confirm via 3D Secure. Mercuryo shows its fee first – typically **1–4%**.

● PASTE OUR ADDRESS

On **"Enter wallet address"**, paste (don't type) the address from our page, then tap **Continue**.

Note: Mercuryo sends BTC straight to our order wallet. Once it lands on-chain (~10 min), we detect it automatically and email your paid confirmation.

REQUIRED ASSETS.

Have these ready before starting Route B – it avoids verification delays. If you're using Mercuryo (Route A), you can skip this page.

IDENTITY

A valid Australian driver's licence or passport, for exchange KYC verification.

ESSENTIAL FOR EXCHANGE SIGN-UP

CAPITAL

A banking app with PayID enabled, for instant AUD deposits.

FOR FUNDING YOUR EXCHANGE ACCOUNT

HARDWARE

A smartphone, plus an authenticator app (Google Authenticator or Authy recommended).

FOR TWO-FACTOR SECURITY

ACCESS

A secure email address, for verification links and receipts.

FOR ACCOUNT RECOVERY

EST. TIME: 15–30 MINUTES

INITIALISE EXCHANGE.

● SERVER: COINSPOT AUSTRALIA

● ACCESS TERMINAL

Download the CoinSpot app, or visit **coinspot.com.au**.

● CREATE PROFILE

Register with a secure email and set a high-strength password.

● VERIFY IDENTITY (KYC)

Upload your driver's licence or passport when prompted. Verification is usually near-instant.

Create a CoinSpot account

Join three million other Australians trading Bitcoin and a whole world of other digital currencies on CoinSpot.

Email

Password

Referral or Affiliate code (Optional)

FUNDING PROTOCOL.

● METHOD: PAYID / OSKO (INSTANT)

● **CALCULATE BUFFER**

Deposit **5–10% more** than your order total, to cover exchange and network fees (e.g. for a \$100 order, deposit \$110).

● **AUTHORISE TRANSFER**

In your banking app, use PayID / Pay Anyone to send the buffered amount to the PayID shown in CoinSpot.

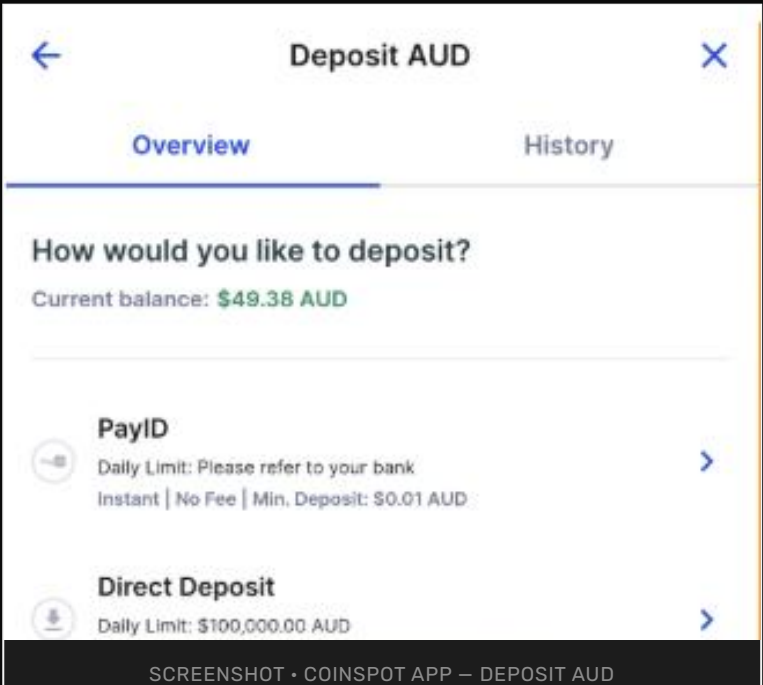

● **CONFIRM REFERENCE**

Include the CoinSpot reference code shown on screen, so your deposit is matched to your account.

● **EXPECT A BANK PROMPT**

Your bank may show a scam-awareness warning when paying a crypto exchange by PayID – this is a normal protection step. Read it, confirm you're knowingly buying crypto yourself, and continue.

STATUS: FUNDS USUALLY ARRIVE INSTANTLY (OSKO)

EXECUTE SWAP.

● MARKET: BTC / AUD

● **SELECT MARKET**

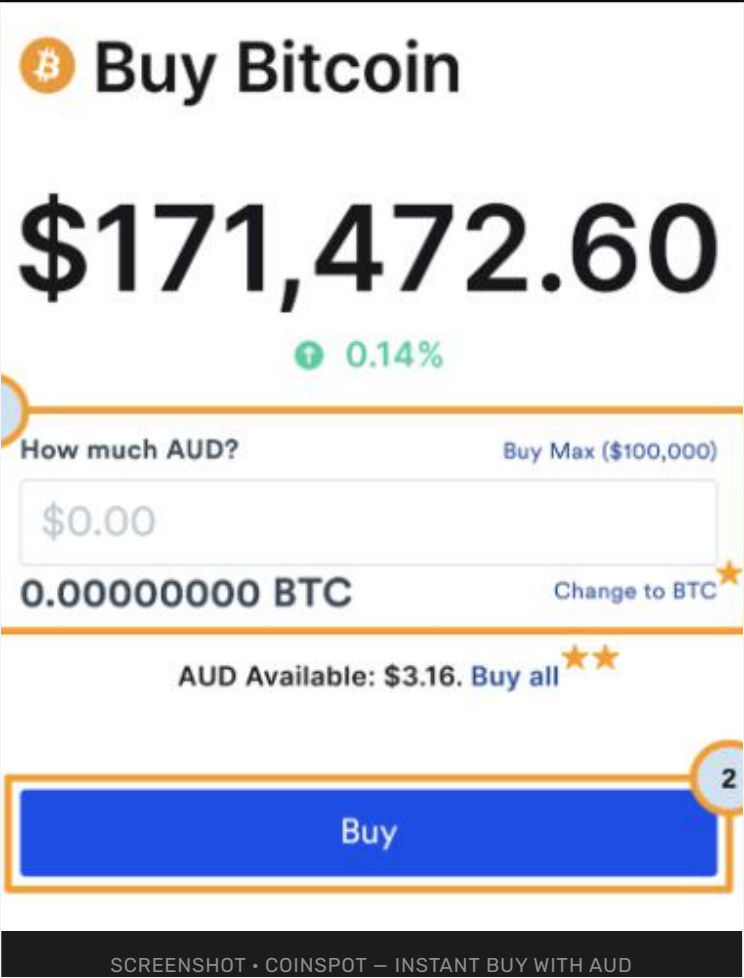

Tap **Buy/Sell** in the bottom menu, then select **Bitcoin (BTC)**.

● **DEFINE VOLUME**

Enter the AUD amount you wish to convert (your buffered deposit, or a specific value).

● **CONFIRM ORDER**

Review the quote, then tap **Buy** to swap your AUD for BTC.

SECURE THE VAULT.

● SOFTWARE: EXODUS WALLET

● DEPLOY SOFTWARE

Download **Exodus** from the App Store or Google Play.

● GENERATE WALLET

Open the app, select **Create New Wallet**, and set a secure passcode.

● BACKUP SECRET KEYS

Write down your 12-word recovery phrase on paper. **Never** screenshot or photograph it.

LOCATE ADDRESS.

● NETWORK: BITCOIN (BTC)

● SELECT ASSET

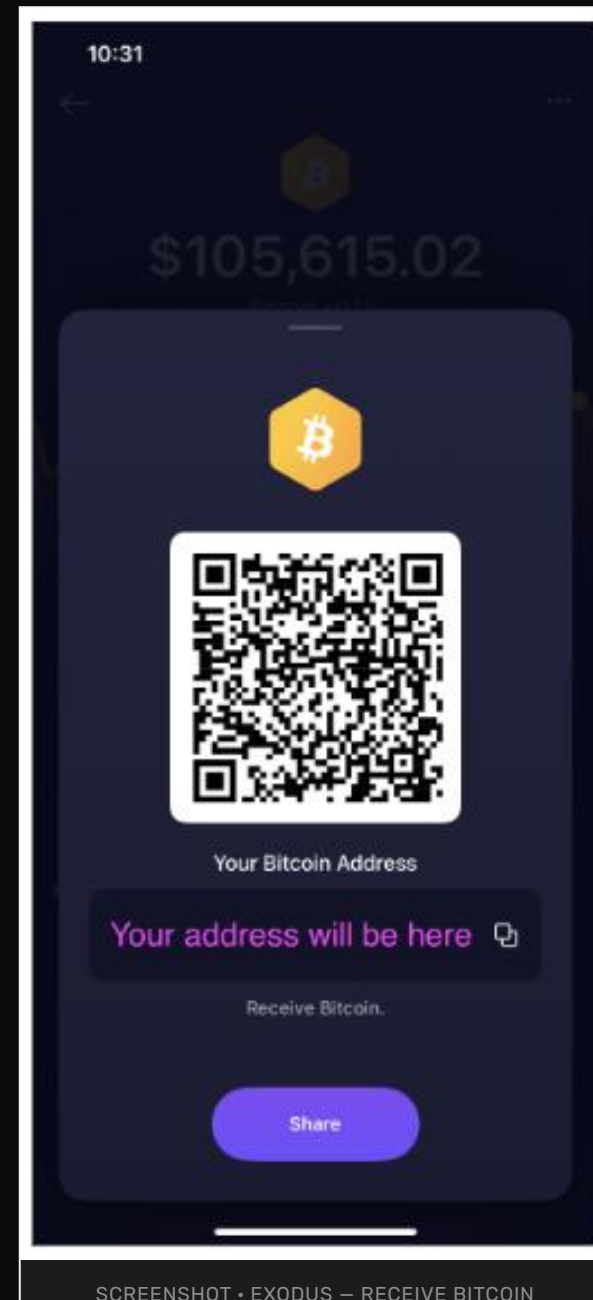

In Exodus, tap **Bitcoin (BTC)**. Make sure you select BTC, not BCH or BSV.

● INITIATE RECEIVE

Tap the **Receive** button.

● COPY STRING

Tap the address starting with **bc1...** to copy it to your clipboard.

INITIATE TRANSFER.

● SOURCE: COINSPOT → DESTINATION: EXODUS

● OPEN SEND TERMINAL

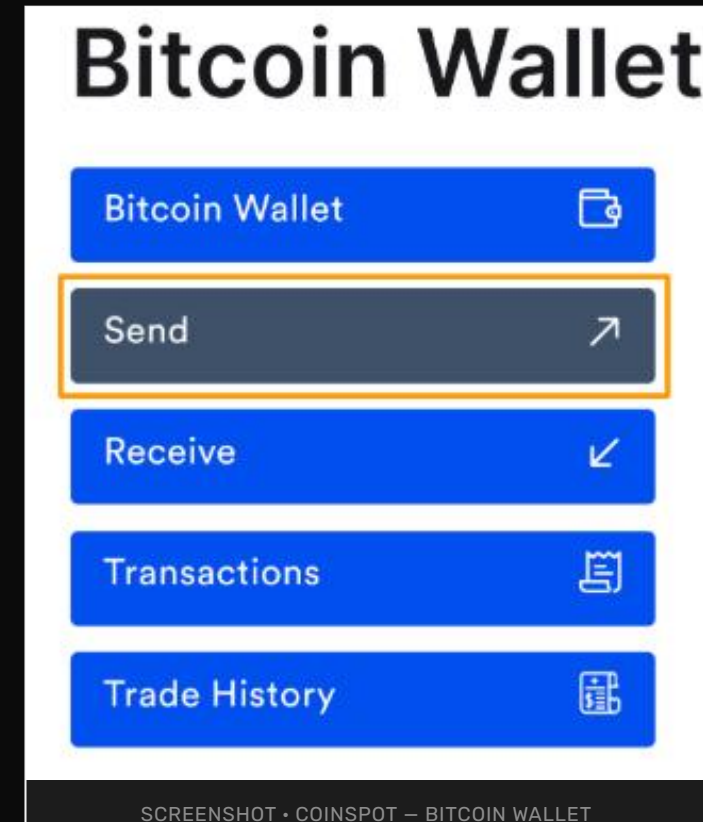

In CoinSpot, go to **Wallets > Bitcoin > Send**.

● INPUT COORDINATES

Paste the address you copied from Exodus into the **Payment Address** field.

● VERIFY INTEGRITY

Check the **first 4 and last 4** characters match exactly before sending. If they match, send the full amount.

FINAL PAYMENT.

● PROTOCOL: PEER-TO-PEER TRANSFER

● ACQUIRE TARGET

Copy the exact BTC address from your Aussie Peptides order confirmation – this is generated for your order specifically.

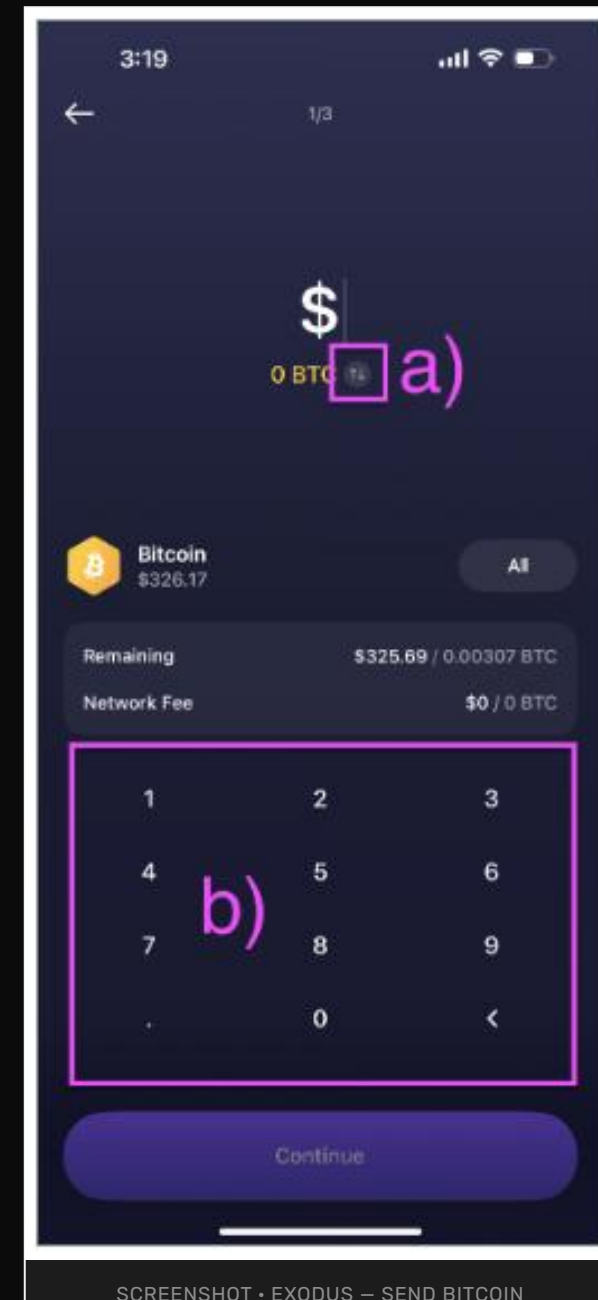

● INPUT EXACT VALUE

Enter the exact BTC amount shown on your invoice. Don't subtract the network fee yourself – Exodus takes it from your extra buffer balance.

● CONFIRM & SEND

Double-check the address, then slide to send. We receive the full amount; the network fee is paid separately.

After sending: save the transaction ID (hash) shown in Exodus and upload it on your order's payment confirmation page, so we can match it to your order quickly.

PROTOCOL SAFETY.

A handful of rules that apply to both routes. Crypto payments can't be reversed, so a little care up front avoids a lost payment.

NO REVERSALS

Blockchain transactions can't be undone once sent. Triple-check every address before confirming.

THE KILL SWITCH

Your 12-word recovery phrase **is** your money. Never share it, screenshot it, or type it into any website.

SECURE CONNECTION

Avoid public wifi when accessing your exchange account or wallet. Use mobile data or a trusted network.

CHOOSING YOUR ROUTE

Mercuryo handles your card and ID directly – simpler, less private. CoinSpot + Exodus keeps funds in a wallet only you control – more control, more responsibility for accuracy.
